You can customize the theme too. See how to customize yours [here](#)

GitHub Readme Streak Stats

Stay motivated while contributing to open source by displaying your current contribution streak

Developed by by [Jonah Lawrence](#).

See how to customize the theme [here](#)

GitHub Profile Views Counter

It counts how many times your GitHub profile has been viewed. Free cloud micro-service.

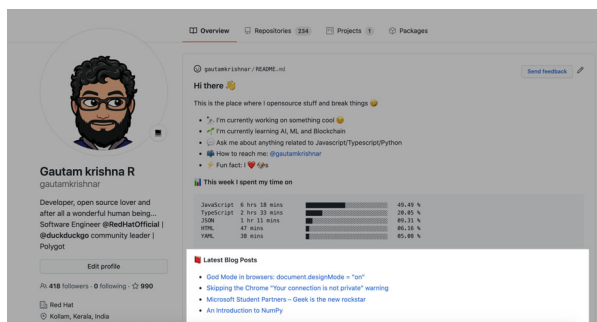

Profile views **63,303**

Developed by by [Anton Komarev](#).

You can customize the color, label and style too. See how to customize [here](#)

Dynamic Latest Blog Posts

Show your latest blog posts from any sources(like dev(.)to, medium etc) or StackOverflow activity on your GitHub profile/project readme automatically using the RSS feed.

Developed by [Gautam Krishna R](#)

How to use

- Go to your repository

- Add the following section to your **README.md** file, you can give whatever title you want. Just make sure that you use in your readme. The workflow will replace this comment with the actual blog post list:

Blog posts

```
<!-- BLOG-POST-LIST:START -->
```

```
<!-- BLOG-POST-LIST:END -->
```

- Create a folder named `.github` and create `workflows` folder inside it if it doesn't exist.
- Create a new file named `blog-post-workflow.yml` with the following contents inside the `workflows` folder:

```
name: Latest blog post workflow
```

```
on:
```

```
  schedule:
```

```
    # Runs every hour
```

```
    - cron: '0 * * * *'
```

```
jobs:
```

```
  update-readme-with-blog:
```

```
    name: Update this repo's README with latest blog posts
```

```
    runs-on: ubuntu-latest
```

```
    steps:
```

```
      - uses: actions/checkout@v2
```

```
      - uses: gautamkrishnar/blog-post-workflow@master
```

```
        with:
```

```
          feed_list: 'https://dev.to/feed/rahuldkjain, https://medium.com/feed/@rahuldkjain'
```

- Replace the above url list with your own rss feed urls. See [popular-sources](#) for a list of common RSS feed urls.
- Commit and wait for it to run
